LEARNING OBJECTIVES FOR THIS SESSION INCLUDE:

- Explore reasons that patients with fragility fractures are not receiving appropriate bone health treatment.
- Describe the importance of orthopaedics in secondary fracture prevention and improving the care of fragility fracture patients.
- Review the linkage between complications of orthopedic surgery and poor bone health.
- Discuss the best medical evidence to identify patients at risk for osteoporosis who are undergoing orthopaedic surgery.
- Review ways to optimize bone health in elective total joint arthroplasty and spine procedures.
- Recall how bone health programs work, including being able to explain example models for programs of various sizes.
- Become aware of opportunities for residents to establish roles in bone health programs within orthopaedic departments.
- Understand how secondary fracture prevention efforts can help to fulfill quality improvement residency requirements.

AGENDA

4:30PM – 4:50PM
Presentation: “Overview of Fragility Fractures and Secondary Fracture Prevention”
Presenter: S. Trent Guthrie, MD, FAOA
Henry Ford Hospital

4:50PM – 5:20PM
Presentation: “Bone Health Optimization in Orthopaedics”
Presenter: Matthew J. Dietz, MD, FAOA
West Virginia University

5:20PM – 6:00PM
Presentation: “Bone Health Program Models and How to Involve Residents”
Presenters: S. Trent Guthrie, MD, FAOA
Henry Ford Hospital
Matthew J. Dietz, MD, FAOA
West Virginia University
Moderator: Gregory A. Brown, MD, PhD
Franciscan Orthopedic Associates

6:00PM – 6:15PM
Discussion and Q&A
