

Bio:

My practice focuses on managing patients with hip pathology. My young adult hip practice includes hip arthroscopies and pelvic osteotomies while my degenerative practice runs the gamut from arthroplasty to complex revisions. My research has focused topics that relate to both sides of the practice with young adult research focusing on the quantification of cartilage quality with clinical and high field MR and on the adult recon side, the interplay between spinal and hip pathology. I am involved in medical student and resident education through the University of Minnesota where I am also faculty for the Adult Reconstruction and Primary Care Sports Medicine fellowships. When not at work I enjoy time with my wife and kids, summer canoe trips, and reading.
