

I completed fellowship and started practicing orthopaedics in 2005 when I moved from New York City to Sioux Falls, South Dakota. Although I joined a private practice, I have created a hybrid practice where I perform clinical research and have joined the faculty of our local medical school where I perform basic science research and have teach and mentor medical students. I play an active role in the management of my orthopaedic group and specialty hospital. In addition, I enjoy participating in the development of medical technologies and implant designs and developing intellectual properties that are relevant to orthopaedics.
