

I am a fellowship-trained orthopaedic oncology surgeon who specializes in the care of children and adults with benign and malignant musculoskeletal tumors, metastatic bone disease, complex pelvic and limb reconstructions, and orthopaedic infections. I received my undergraduate degree at Dartmouth College and medical degree at Duke University. After completing my residency at the Harvard Combined Orthopaedic Residency Program and fellowship training in musculoskeletal oncology at the Massachusetts General Hospital (MGH), Beth Israel Deaconess Medical Center, and Boston Children's Hospital, I joined the MGH Orthopaedic Oncology service and the faculty of Harvard Medical School. My clinical interests and expertise focus on orthopaedic oncology. It is my privilege to care for patients with extremely challenging musculoskeletal problems, including upfront oncologic care and longitudinal management of the orthopaedic complications of cancer treatment. I am also a founding member of the Orthopaedic Trauma/Non-Trauma service at MGH, taking level 1 orthopaedic trauma call and providing acute surgical care for orthopaedic infections. I serve as the medical student clerkship director in orthopaedics at MGH, and I value my involvement in educating trainees of all levels.

I live in Boston with my wife (a nephrologist), and two daughters.
