

I am Jibanananda (Jib) Satpathy, MD, Professor of Orthopedic Surgery, Vice Chair of the Department of Orthopedics, and Director of Trauma at Virginia Commonwealth University. My clinical practice focuses on adult reconstruction and orthopedic trauma, with particular interests in complex primary and revision arthroplasty, geriatric acetabular fractures, and periprosthetic fracture management.

I completed fellowship training in adult reconstruction and trauma and have held progressive academic and leadership roles within my institution, including Division Chief of Orthopedic Trauma and Chair of the Adult Reconstruction Fellowship Core Competency Committee. I am deeply committed to resident and fellow education, mentorship, and faculty development, and I have been honored with multiple teaching awards from both trainees and medical students.

My academic work centers on outcomes-based research in arthroplasty and trauma, surgical innovation, and optimizing care for medically complex patients. I am actively involved in national presentations, peer-reviewed publications, and editorial activities. Through my clinical, educational, and leadership efforts, I strive to advance evidence-based care, foster collaborative team cultures, and support the next generation of orthopedic surgeons.
