

Jason W. Stoneback, MD Bio

Jason W. Stoneback, MD, is an Associate Professor in the Department of Orthopedics at the University of Colorado School of Medicine. He serves as the Vice Chair of Clinical Affairs, Chief of Orthopedic Trauma and Fracture Surgery, and Director of the Limb Restoration Program. Additionally, he is the Director of the Osseointegration Program and Bone-Anchored Limb Research Group (BALRG) at the University of Colorado, which provides a comprehensive interdisciplinary approach to amputee care.

Dr. Stoneback specializes in the treatment of simple and complex fractures, non-unions, malunions, osteomyelitis, orthopedic infections, limb-length discrepancies, deformity correction, post-traumatic limb salvage, and osseointegration surgery in amputees. The need for a multidisciplinary approach to treat these conditions led to the creation of the Limb Restoration Program at the University of Colorado Hospital. This program combines comprehensive orthopedic, vascular, wound, soft tissue reconstruction and rehabilitative care to serve a growing number of patients with complex extremity injuries.

Dr. Stoneback's clinical and research interests focus on the interdisciplinary approach to optimizing outcomes for patients with limb loss or those at risk of limb loss. As Director of the Osseointegration Program and Bone-Anchored Limb Research Group (BALRG) at the University of Colorado, he leads efforts to advance innovative surgical techniques and comprehensive amputee care. His program specializes in both screw and press-fit osseointegration techniques, offering cutting-edge solutions to restore mobility and improve the quality of life for patients. He has always been intrigued and inspired by the connection between form and function and is highly motivated to provide patients with real options – often when all other choices have been exhausted.
