Dr. Bullock is an orthopaedic surgeon specializing in all aspects of hip and knee replacement, including primary and revision arthroplasty, periprosthetic joint infection management, and fracture care. His clinical expertise includes same-day total knee and total hip replacement, minimally invasive anterior approach total hip arthroplasty, robotic (computer-assisted) hip and knee replacement, and complex revision hip and knee reconstruction.

Dr. Bullock's research interests focus on robotic-assisted joint replacement, robotic-assisted revision arthroplasty, biologic responses to implants, periprosthetic joint infection, patient optimization, and sacroiliac joint dysfunction. He is actively involved in advancing evidence-based orthopaedic care through clinical research, innovation, and academic collaboration.

Passionate about education, Dr. Bullock is dedicated to teaching and mentoring medical students, residents, fellows, and practicing orthopaedic surgeons. He is committed to advancing the next generation of orthopaedic leaders while improving patient outcomes through lifelong learning, scholarship, and innovation.
