Professionally, I am a fellowship trained foot and ankle orthopaedic surgeon who enjoys treating congenital deformities, degenerative disease, and trauma. I have grown to take on increasing leadership roles in my department, institution, and national societies. I embrace the academic part of my career, and love teaching residents, run our fellowship program, and partake in clinical and basic science research.

I enjoy the collaborative nature of our job, working with other physicians, surgeons, physical therapists, researchers, orthotists, etc. The ability to build continued relationships and learning into our career is something special. I look forward to the continued growth opportunities and leadership training that comes with AOA membership. I continue to strive to be a leader in our field!
