I grew up in Cincinnati, Ohio and completed medical school at Ohio State. I attended the University of Minnesota for residency and did an orthopaedic trauma fellowship at Vanderbilt. I started practice at Washington University in St. Louis and returned to Vanderbilt in 2023.

As a Clinical Associate Professor in the Division of Orthopaedic Trauma, I am actively involved in clinical care and research directed to improve the care of patients with lower extremity, upper extremity, and pelvis fractures and incorporating strategies that can optimize patient outcomes into management pathways. I currently serve as site-PI on several multi-center clinical trials, and I have served as PI on single center and multi-center studies in the past. Through my clinical practice and current and previous research, my goal is to understand injury and patient factors that drive outcomes in patients with traumatic musculoskeletal injuries.
